

INTERVALS

An **interval** is the distance between two notes. When the notes of an interval are played one after the other, the interval is called **melodic**.

When the notes of an interval are played at the same time, the interval is called **harmonic**.

All intervals have a specific number. This number is determined by counting the letter names of the notes in the interval from the lowest to the highest.

There are five letter names from C to G.

C D E F G
1 2 3 4 5

This is an interval of a 5th.

1. Name the following melodic intervals.

2. Name the following harmonic intervals.
